<b>Suitable extinguishing media:</b>	Note the product contains water and cannot burn. <b>Extinguishing media - small fires</b> Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide. <b>Extinguishing media - large fires</b> Alcohol-resistant foam or water spray.
<b>Extinguishing media which must not be used for safety reasons:</b>	Do not use a solid water stream as it may scatter and spread fire.
<b>Specific hazards during fire fighting:</b>	Exposure to decomposition products may be a hazard to health.
<b>Special protective equipment for fire-fighters:</b>	Wear full protective clothing and self-contained breathing apparatus.
<b>Important:</b>	Do not allow run-off from firefighting to enter drains or water courses. Cool closed containers exposed to fire with water spray.

## 6. ACCIDENTAL RELEASE MEASURES

## 8. EXPOSURE CONTROL / PERSONAL PROTECTION

**Occupational Exposure Limits** lambda-cyhalothrin; 8 h TWA 0.04 mg/m<sup>3</sup>.

**TWA:**

**Ventilation and Engineering Controls:**

Containment and/or segregation is the most reliable technical protection measure if exposure cannot be eliminated. The extent of these protection measures depends on the actual risks in use. If airborne mists or vapors are generated, use local exhaust ventilation controls.

Assess exposure and use any additional measures to keep airborne levels below any relevant exposure limit.

Where necessary, seek additional occupational hygiene advice.

**Respiratory Protection:**

A combination gas, vapor and particulate respirator may be necessary until effective technical measures are installed. Protection provided by air-purifying respirators is limited.

Use a self-contained breathing apparatus in cases of emergency spills, when exposure levels are unknown, or under any circumstances where air-purifying respirators may not provide adequate protection.

**Eye Protection:**

Eye protection is not usually required. Follow any site specific eye protection policies.

**Hand Protection:**

Chemical resistant gloves should be used. Gloves should be certified to an appropriate standard. Gloves should have a minimum breakthrough time that is appropriate to the duration of exposure. The breakthrough time of gloves varies according to the thickness, material and manufacturer. Gloves should be changed when breakthrough is suspected. Suitable material: Nitrile rubber

**Skin and Body Protection:**

Assess the exposure and select chemical resistant clothing based on the potential for contact and the permeation / penetration characteristics of the clothing material.

Wash with soap and water after removing protective clothing. Decontaminate clothing before re-use, or use disposable equipment (suits, aprons, sleeves, boots, etc.)
